Agenda on other side

Hagerman & Company Enterprise Data Management Services

In order to survive in today's competitive marketplace, companies must not only constantly innovate, but also constantly refine and streamline their business processes. Companies must continually look for ways to optimize their performance, eliminate redundancy, and access and control critical documents and data dispersed throughout the organization in order improve operations and decision-making at every level.

Additionally, trends that have emerged in business over the last few years are increasing the need for improved systems and processes such as:

- Compliance (ISO, QS, FAA, FDA, Sarbanes-Oxley, etc.)
- Foreign competition, globalization and outsourcing
- Cost reduction and efficiency
- Reducing time to market
- Increased use of complex 3D design software

Enterprise data management (EDM) solutions allow companies to meet these needs and achieve these goals by offering the following features and capabilities:

- A secure data repository so that all information is accessed only by the correct users in the correct manner
- Document check in, check out, release and other document workflow processes
- Automatic document revisioning and revision history
- Management of all file and item types
- Easy searching and retrieval of data
- Realtime reporting to give management a 20/20 view of company operations and project status
- Viewing and redlining of electronic documents
- Business process workflow in order to support any complex engineering, manufacturing, financial, sales, customer support or other internal business process (with full e-mail notification and reminders)
- System integration to tie into other company systems and databases
- Multi-site capabilities to provide for data sharing and synchronization between multiple company locations

Hagerman & Company offers a variety of software and services for enterprise data management (EDM) to help allow you to survive and prosper in today's competitive environment. Our areas of expertise in data management include:

- Electronic document management
- Product data and lifecycle management
- Sales contact management
- Customer relationship management (CRM)
- Bill of materials automation and ERP integration
- Business process management or workflow
