

Run Construction Projects with **Total Control**

Forma Build unifies project, cost, and field execution workflows so teams can predict outcomes, control risk, and deliver with confidence at scale.

 **AUTODESK** Forma Build

Connected workflows to reduce risk

Align teams with connected construction workflows and shared data that preserve context, surface issues earlier, and reduce costly rework.

Unified field and office execution

Capture quality and safety data once in the field and connect it instantly to the office for real-time visibility and faster issue resolution.

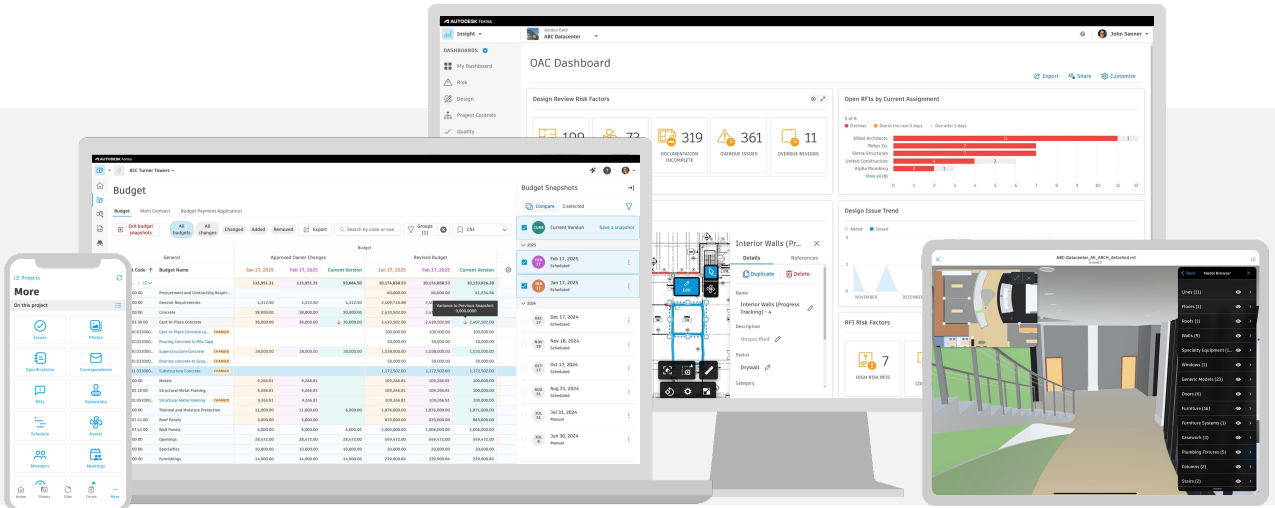

Stronger cost control, fewer surprises

Centralize all cost activity to spot cost-risk sooner, forecast with confidence, and protect margins from kick off through closeout.

A single platform for better outcomes

Work from unified data, actionable insights, Autodesk AI, mobile access, and an open ecosystem built to streamline construction delivery.

Connected workflows, teams, and data with Forma Build

Project management

- Specifications
- Submittals
- RFIs
- Meetings
- Correspondence
- Schedule
- Work Planning

Cost management

- Budget & contract management
- Change management

- Safety observations
- Safety inspections
- Daily Reports

Project closeout

- Commissioning
- Handover packages
- As-builts
- Warranty management

“

Build has been a complete game changer for a lot of our processes. Not only is this a huge help for us with closeout, but we also use it for commissioning, startup checklists, punch lists, and more. We're able to deliver a higher quality product because of those things.

– Tim Kelleher,
Operational Standards & Innovation Manager at Brinkman Construction
